Business Performance Analysis

Monthly Revenue, Expenses and Operating Profit

John Omole
Mathematics and Statistics

October 28, 2026

Abstract

This report was generated automatically by a Python script from a CSV file. It calculates operating profit and profit margin for each month, summarises the year, draws a chart, and writes this LaTeX document. The dataset is fictional.

1 Methodology

For each month t, operating profit, profit margin and revenue growth are

$$P_t = R_t - E_t, \tag{1}$$

$$M_t = \frac{P_t}{R_t} \times 100\%, \tag{2}$$

$$G = \frac{R_{\text{last}} - R_{\text{first}}}{R_{\text{first}}} \times 100\%. \tag{3}$$

2 Data

Table 1 lists the monthly figures. All totals are computed by the script from the rows shown, so they always agree with the table.

Table 1: Monthly business performance

Month	Revenue	Expenses	Profit	Margin
January	8,200	5,100	3,100	37.8%
February	9,100	5,400	3,700	40.7%
March	8,700	5,250	3,450	39.7%
April	10,300	5,900	4,400	42.7%
May	11,100	6,200	4,900	44.1%
June	11,800	6,500	5,300	44.9%
July	12,500	6,900	5,600	44.8%
August	12,100	6,750	5,350	44.2%
September	13,400	7,200	6,200	46.3%
October	14,100	7,600	6,500	46.1%
November	14,900	7,900	7,000	47.0%
December	15,800	8,300	7,500	47.5%
Total	**142,000**	**79,000**	**63,000**	**44.4%**

3 Key Performance Indicators

Table 2: Annual performance indicators

Indicator	Value
Total revenue	142,000
Total expenses	79,000
Total operating profit	63,000
Average monthly revenue	11,833
Overall profit margin	44.4%
Revenue growth (January to December)	92.7%

4 Results

Figure 1 shows the monthly movement of revenue, expenses and operating profit.

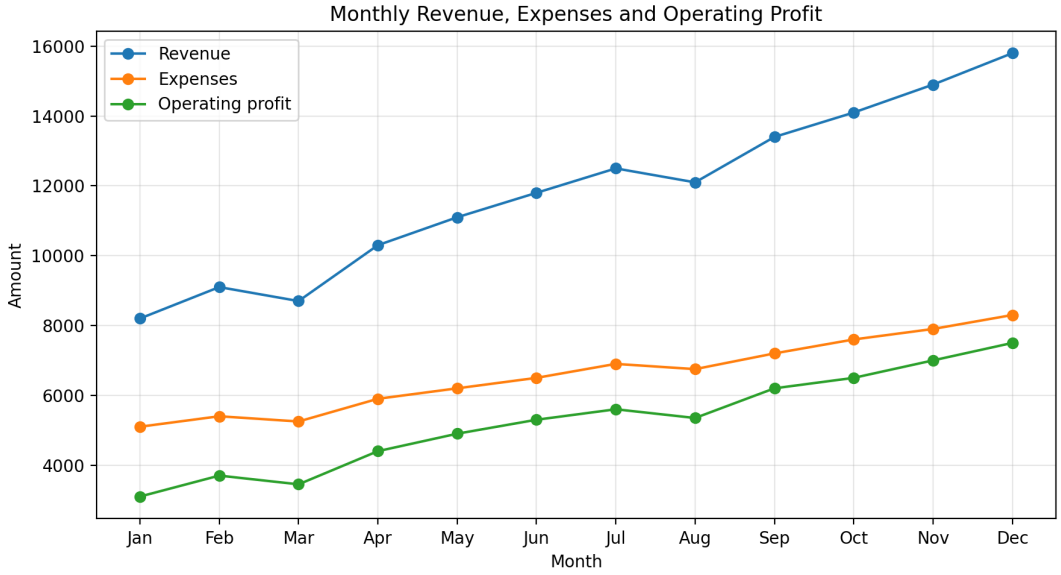

Figure 1: Monthly revenue, expenses and operating profit

5 Findings

The following points were generated automatically from the data.

1. Revenue grew 92.7% from January to December.
2. Total operating profit was 63,000, an overall margin of 44.4%.
3. The most profitable month was December (7,500).
4. Revenue dipped compared with the previous month in: March, August.
5. Expenses stayed below revenue in every month.

6 Limitations

The dataset is fictional and compact. It excludes taxes, depreciation, financing costs, inflation adjustment and product-level detail.
